

Weatherfor Golf – Instructions for Use

1. Upon launch of the application users will be taken into the search page where instructions will be viewable up to the point when a location is selected and saved. The app instructions are always available in the More tab.
2. Within the search functionality users have the option of searching by a single club or location, or by clicking on the compare tab are able to enter two locations to compare
 - 2.1. Search by Club - all circa 3,000 UK and Ireland Clubs are stored in the database and the list will filter down as more letters are entered into the search field until the desired club name is viewed
 - 2.2. Search by Location – all UK and Ireland place names are searchable. Users should type the full name and then press search to find matching locations
3. Once the desired club or location has been found users have the option to save to their favourites by clicking the plus sign or proceeding to the forecast without saving by selecting the name or right arrow. This then returns the user to the search page where they should click the right arrow again to view the single location or compare the two locations as selected.
4. Within the detail view users have several options:
 - 4.1. The weather symbols on the top right hand side of the screen are scrollable allowing users to view all available data for the venue. Users can easily set their preferred order within the settings page as detailed in point 7.2 below.
 - 4.2. Users can then choose to scroll through the available forecast time period by dragging the bottom field or alternatively select the day which they wish to view the forecast for.
5. Within the compare view users retain the ability to scroll through the time periods by dragging the screen left and right as indicated by the arrow, but due to space restrictions are not able to select the day.
6. Within both the detailed and compare views an additional function of the apps is to provide further data on the selected club. By clicking the Info tab next to the venue name users will be able to view the Club Name, Address, Number of Holes, Yardage, Par, Phone, Email and Web Address as well as having the option to add to contacts and view an expandable map which can be expanded to allow users to view the location and layout prior to play.
7. Within the More tab users have a variety of options:
 - 7.1. The first screen contains our trademarked 'Nearest Fair Weather Club' function, which lists – based on the users current or otherwise latest selected location – those clubs which as per our forecast will not receive rain within the upcoming six hour period. Users can simply shake the app whilst on this screen to refresh the locations to those most immediate to them.
 - 7.2. The second screen contains the app settings where users are able to personalise the app to remember the last page, decide on the 12 or 24 hour clock and choose Celsius or Fahrenheit. Within this page users can also drag the weather symbols to set the order in which the symbols appear in the detail and compare views.
 - 7.3. The final screen within the More tab is the instructions page which users will have viewed the first time they enter the application.
